Barber App

Proposal with Technical Details

→ Steps of Development with Technology use:

1. App UI design [Figma]
2. App Frontend Development [iOS & Android using Flutter]
3. App Backend Database & API Development [Node.js]
4. Functional App with API Integration [iOS & Android using Flutter]
5. Admin Panel [React.js & Node.js]

→ Development Process:

Here are the steps of app development process:

- **App Wireframe & Designing:**

Here, our app designer will start work on your app UI design as per your app logo and theme colour, and we will provide revisions until your design is ready as per your demand.

- **Backend Database & API Development:**

Once design is ready, We have to design the database structure and start with API development. This API will be used to interact with the app with the database and all data will be stored in the server with help of these APIs.

- **App Development:**

When API development work starts, we parallelly start with app static design as per our final design provided by designer, so it will have hard coded static data only.

Once the backend is ready with API, We have to start with app coding after app design to make the actual app run with real time data.

- **App Testing & Bug Fixing:**

Before the app is fully ready for submission, I have to make sure that the app is fully tested and working smoothly.

Here we will provide an app for testing with respect to different milestones while developing such modules and you can also test it and we will support you until all bugs are fixed.

- **Delivery:**

Once the app is ready for submission, that means the app is ready for delivery, including source code.

Here, we will upload your app to stores and send you the final source code of your app.

- **Maintenance:**

We will provide app maintenance for 1 month after app development without any charges, but it will not include any other new module work.

→ **We required below details from you:**

1. Server login details for AWS OR Digital Ocean OR other
(Digital ocean will cost you **\$14/month** - AWS cost you as per usage)
2. Apple app store account (**\$99/year**)
3. Android play store account (**\$25**)

Other paid SDK or Library (Video & Audio Call) should also be provided by the Client in case required for this app.

→ **App Development Timeline & Cost:**

I will provide a team for this app development so around 4 developers will work on this app including designer and QA.

App will have below features:

- Same as in figma file and add missing screens
- As discussed in meeting

App Cost Breakdowns / Milestones with timeline:

1. App UI design [Figma] - \$500 (Add missing screens)
2. Static App Frontend Development - [Flutter] - \$2000
3. Backend API development for App [Node.js] - \$1500
4. Functional App with API Integration [Flutter] - \$2500
5. Admin Panel [React.js] - \$1000

Total Cost: **\$7500 (USD)**

Timeline : **4 Months around (Try to deliver asap)**

NOTE: We will follow all above steps on Fiverr only.

Only new updates with new features or modules should cost you separately based on the requirements.

→ **App Maintenance Cost after App Submission:**

Basic maintenance cost starts from \$300 per month (20 hrs/month) but the final cost we can decide based on your requirement like number of developers or full time/part time services and so on.

→ **We provide you below services with App development:**

- App maintenance after development until your app becomes live in stores.
- New features and enhancements will charge you separately.
- Also delivered your app source code after the completion of this app.

→ **Technology:**

- Mobile app UI/UX design using Figma
- Flutter for iOS & Android both platform
- Backend using node.js (with MySql or MongoDB)
- Admin using react.js

→ **We need from you to start work:**

- App Logo to start with the First Milestone of app UI design.
- App wireframe on paper or any detailed document with all features for this app.
- Share any reference app URL to review for design and app workflow.

→ **Our Portfolio:**

- **App UI/UX works:**
<https://tinyurl.com/myappuiux>
- **Live App URLs / Portfolio:**
<https://tinyurl.com/liveappworks>

Thank you!

Best Regards,
Ashish Mulani
(Founder/CEO)
